

SUMMARY

I'm a Back End Developer with 7+ years of experience in designing, enhancing and maintaining web applications. My passion lies in learning about the latest technologies. I love PHP and JavaScript and am always learning more about them.

EXPERIENCE

Part Time [Back-End / Full-Stack] Developer

09/2022 - Present

Freelancer

Due to the mandatory military service for men in Iran, I worked part-time for two years as a back-end developer and a full-stack developer.

- Skill-up in Laravel and PHP
- Design and development of employee, currency and stock management software products

Back-End Developer

01/2022 - 08/2022

Novin.Dev

I started at Novin.dev as a NodeJS developer, the big difference Novin.dev had with the rest of my work experiences was the professional and experienced people I met there, which helped me progress. I learned about microservices and worked with message broker tools like RabbitMQ to improve microservice performance.

- Work With Microservices and message broker
- Skill-up in NodeJS
- Deepening in NestJS and ExpressJS

Back-end Developer

07/2020 - 12/2021

Jihaat

It was the first time in Jihaat that I experienced working in a professional team. Jihaat was working in the field of advertising and branding for businesses. My job was to design and create the API for the Front-End team.

- Create RESTful APIs
- I became familiar with the Scrum framework
- Creating b2b shopping websites in the field of construction, medicine and common daily products
- I became familiar with solid principles
- Deepening in the git version control
- Get started with Node.js frameworks like NestJs

Junior Back-end Developer

02/2020 - 06/2020

Freelancer

I think every successful programmer has been a freelancer for a period of their career. I also decided to work as a freelancer for a while to have more useful time to learn and more power in choice.

- Deepening in the Laravel framework
- Learn about design patterns and clean code
- Familiarity with CI / CD tools

Mahbaan

Mahbaan startup operated in the field of insurance training and sales.

- Redeveloped the company website using CodeIgniter, jQuery, material-bootstrap
- Create user management panels using Laravel or CodeIgniter and simple front-end libraries such as jQuery, Material-bootstrap
- Create smart sites to calculate insurance prices using formulas and sort insurance companies by price, popularity, offices and distance.

EDUCATION

Software Engineering

2020

Apadana Institute Of Higher Education - Associate of Engineering

Software Engineering

2018

Bahonar University Of Shiraz - Associate of Engineering
